

Your single-source solution for world-class coating equipment

Custom coating equipment and management services

Liquid, powder, electrocoat and pretreatment

We protect and beautify the world®

Adapting and changing to meet your demands

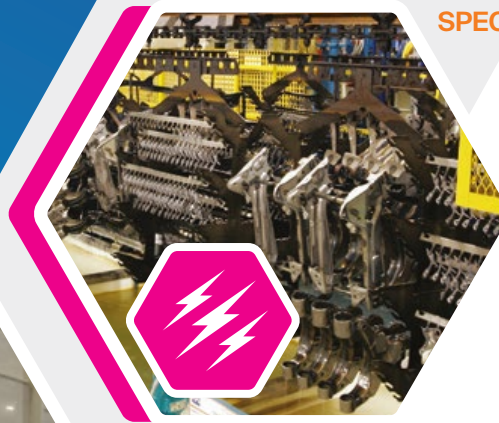

Your business is constantly evolving, whether you're an original equipment manufacturer (OEM) or a supplier that provides coated parts to them. That's why you need a coatings equipment supplier that can adapt quickly to your changing operational demands.

PPG can help. As an integral part of the world's largest coating company, our full-service equipment division routinely designs and installs custom-built protective coating lines for OEMs and tier suppliers and backs them with the industry's most extensive customer-service capability.

When you need a total turnkey solution, PPG delivers. Once your equipment is in place, our team can commission it, start it up and operate it. With our management service, we provide complete, on-going process monitoring and control to maximize production efficiencies and maintain performance specifications.

**PRETREATMENT AND
SPECIALTY COATINGS**

ELECTROCOAT

LIQUID COATINGS

POWDER COATINGS

Global benefits, local service

We are one of the few coatings companies in the world that has expertise in all four major coatings technologies: liquid, powder, electrocoat and pretreatment products.

In addition to designing, building and installing traditional coating equipment for more than 50 years, we've also custom-designed paint lines to coat parts ranging from razor handles and ink-pen cartridges to mufflers, heat shields and tractor, truck and automobile frames.

When you work with our experts, you get the full weight of that experience and so much more – a true partner with the knowledge and commitment you need to make the most of your equipment investment.

How the process works

At PPG, we know first-hand that there's no such thing as a plug-and-play equipment solution. That's why we have a comprehensive four-step program that guides you through the entire process — from needs assessment and preliminary recommendations to final delivery, start-up and beyond.

STEP 1

INTERVIEW

We meet with your production and management teams to determine your plant's scope of needs, based on parameters such as the types of parts to be coated, throughput targets, specified quality control tolerances and more.

STEP 2

TEAM SOURCING

Once we understand your production requirements, we build a team of experts to achieve your goals. Combining the best experts PPG has to offer with a select team of outside specialists, we create a specific solution for you.

STEP 3

PROPOSAL

Relying on that combined expertise, we customize a set of recommendations and present them to you and your team.

STEP 4

EXECUTION AND SUPPORT

Once you agree to the final design, we create a detailed timeline that spells out the implementation process from start to finish, including fabrication, delivery, installation, commissioning, start-up, and process monitoring and control.

Equipment solutions

We offer the industry's broadest range of equipment solutions, as well as innovations such as "flex lines" that are fitted to the size of your parts, and transportable modular equipment that you can move from one facility to another as the needs of your business change. Our full range of expertise encompasses:

- E-coat lines
- Paint booths
- Powder and liquid ovens
- Powder booths
- Blast systems
- Washers
- Conveyors
- Air make-up
- Application equipment
- Turnkey solutions

Coatings services

PPG offers flexible coatings services. We can design, install and start your equipment, turning it over to your team; or we can commission it, staff it and operate it using the same process monitoring and control systems we use in our own plants. Our full range of on-going solutions services includes:

- Complete on-site line operations
- Process monitoring and control
- Management staffing
- Load/unload labor
- Preventative maintenance
- SPC chemical monitoring
- Inventory tracking
- Guaranteed start-up
- Commissioning and training
- Chemical titrations
- Breakdown maintenance
- Chemical adds
